

We invite master's and PhD students to the

SummerSchool Energy

Financing, participation, and environmental protection in community renewable energy projects

28th August – 1st September 2023
in Lüneburg, Germany

Apply now
until 31st May.
No participation fees

Community renewable energy facilities are key to the energy transition. During the summer school we want to explore the intersections of financing, participation, and environmental protection within the planning and implementation of community renewable energy projects.

The summer school provides the space for master's and PhD students to share insights, make new contacts, and gain practical experience. Here you can discuss in a collaborative atmosphere how and why citizens should participate in financing the energy transition and what role environmental protection and international frameworks play in the planning of renewable energy plants.
